

## The Residual Heat Recovery System in Xixiang Plant Was Put into Operation

With strong support of the Group and great efforts of staff in Xixiang Plant, the residual heat recovery system in Xixiang Plant was successfully put into operation on 1 November.

The operation of such system in Xixiang Plant will reduce approximately 20,000 tons of CO<sub>2</sub> emission per annum and the energy utilization efficiency will be markedly improved, which will make great contributions to energy saving and emission reduction as well as resource utilization of Xixiang.
