

The Residual Heat Recovery System in Mianxian Plant was Put into Operation

With great support of WCC Management and efforts of staff in Mianxian Plant, the residual heat recovery system in Mianxian Plant was successfully put into operation on 27 November.

The power consumption and exhaust emission are to be significantly reduced after the operation of such system in Mianxian Plant, which not only lowers the production cost but also makes great contributions to energy conservation and emission reduction as well as creates favorable conditions for WCC to strengthen the Southern Shaanxi market.
