

WCC was invited to attend the 9th One Belt One Road Summit Forum on China' s Nuclear Power Frontier

On Dec 07, 2017, the 9th One Belt One Road Summit Forum on China' s Nuclear Power Frontier was held in nuclear power technology research & development center of Shanghai Zhong Guanghe, more than hundreds of nuclear power enterprises around the world attend this summit forum including WCC with the latest technology in nuclear power cement.

Focusing on new project process, promote industrial chain matching and help nuclear power go abroad as the theme of the summit forum, new project of nuclear power and international cooperation as the key topics have been discussed. Cement as the one of essential raw materials to nuclear power project, Portland cement for nuclear power which independent researched and developed by WCC becoming the focus. WCC introduce nuclear cement' s technological characteristic and performance, approach of application & production process. Nuclear cement has low heat of hydration, high strength at the beginning, high strength increase rate, dry shrink and etc, it suitable for application in a key link in the process of nuclear power plant construction.

WCC will make full use of its advantage and involve in nuclear power construction in domestic and oversea to make great contribution for green sustainable development.
