

3D Printing Building Materials Research Center was Established in WCC

Signing & opening ceremony of 3D printing building material research center between WCC & He Bei Industrial University was held in the morning of May 14, vice president & professor Ma Guowei from He Bei Industrial University , chairman Zhang Jimin & CEO Ma Weiping presented the ceremony.

CEO Ma Weiping made a welcome speech and pointed out that WCC is aim to make the biggest special cement and the strongest technology in China, he said that core technology is corn competition, 3D printing not only show a way but also give a direction to manufacturing, it will be a new trend of global manufacturing. Cooperation between both parties will open a new chapter of

building in new technology field.

With the rapid development of the country, there is a market requirement for 3D printing , said vice president & professor Ma Guowei, 3D printing technology building material research center will be the first 3D printing research center not only in China, even in the world with the highest positioning, highest quality and multi-products.

Facing the transformation and upgrading of national macro policy and industry, our cooperation open the gate of 3D printing, WCC must take opportunity and break the inherent thinking, this signing will be the new starting for future cooperation, WCC's Chairman Zhang Jimin said.

The cooperation with He Bei Industry University for 3D printing technology forms a new industrial advantage to realize the double harvest of social and economic benefits.
