

# WCC was Invited to Participate in the Seventh Cement Industry Environmental Protection Forum

On 11st and 12th of June 2018, the 2018 7th Cement Industry Energy Conservation and Environmental Protection Summit Forum was held in the ancient capital, Xi'an. The forum was jointly organized by Cement Magazine, China National Knowledge Infrastructure (CNKI) and National Building Materials Technology Library. Zhou Yong, General Manager of CNKI, Li Jiang, Deputy Director of Building Materials Information Institute, and over 300 experts and leaders from more than 100 cement factories and building materials research institutes throughout China. Mr. Wang Fayin (“Mr. Wang”), Vice president of WCC, attended the opening ceremony of the Forum on behalf of the Company.

On behalf of supporting units, Mr. Wang addressed on the conference at the opening ceremony. Mr. Wang said that establishment of China's Cement Industry Energy Conservation and Environmental Protection Technology Summit Forum have been vigorously promoted the exchange and cooperation of policies, funds, talents, technology and information of the cement industry in the field of energy conservation and environmental protection and also showed the willingness and achievements of the cooperation of cement industry in energy conservation and environmental protection and realize green development. As a member of the world cement sustainable development organization, WCC attaches great importance to energy conservation and environmental protection and have always taken green development as the focus of the group's strategic development. In 2018, WCC actively explores specific measures of transformation and upgrading and high-quality development, put forward the proposal to build garden type factory development objectives. In accordance with the general requirements of green and intelligent manufacturing advocated by the State, WCC will build a green model factory in western region, strive to be a cement enterprise respected by the society and the government, and be a respected cement man. We hope all the experts and scholars treat the Forum as an opportunity to implement the concept of green development, take concrete actions to build a sustainable cement industry, work together to build a harmonious society and a better world and write a new chapter for the healthy and

sustainable development of the cement industry.

After the opening ceremony, the conference held the 2017 China cement magazine excellent paper and excellent correspondent award ceremony. Nearly 20 experts related to energy conservation and environmental protection conducted a keynote speech. New technology and new applications of energy conservation and environmental protection won nearly 500 attendees attention. At the same time, the representatives and participating experts had deeply interactions. Representatives actively asked questions and consulted experts on issues of concern to their enterprises and experts replied with wonderful and detailed answers. On some hot issues, the delegates also expressed their views actively. The atmosphere was warm and the interaction was frequent and pleasant.

The successfully holding of the energy conservation and environmental protection Summit Forum not only promoted environmental protection and energy conservation, technological innovation and progress in the cement industry, but also explored the technological potential of the enterprise. The group will actively respond to the national environmental policy call, enhance the competitiveness of enterprises, and adhere to the sustainable development path.
